Safe, secure storage

Milestone Dates

- Chemical weapons storage began in 1942
- Construction of TOCDF began in 1989
- Disposal operations began in 1996
- Complete destruction of GB nerve agent-filled munitions on March 15, 2002
- Complete destruction of VX nerve agent-filled munitions on June 3, 2005

TOCDF Update

The U.S. Army and EG&G Defense Materials, Inc, on June 6 began a major, unprecedented joint project to sample the contents of Deseret Chemical Depot's (DCD's) stockpile of bulk containers filled with mustard blister agent.

As of July 16, agent samples have been removed from 139 ton containers and 130 agent characterization analyses have been completed. The results will be used to determine when ton containers will be processed through the TOCDF.

The sampling project is expected to take two-and-a-half to three years to complete. Bulk container disposal operations are expected to begin this summer, targeting for destruction of sampled containers identified as having no or low mercury contamination and low solids content.

Leading the Way to a Safer Future

The Tooele Chemical Agent Disposal Facility is safely destroying the stockpile of chemical weapons stored at Deseret Chemical Depot, while ensuring maximum protection for our workers, our community and our environment.

Protective Equipment

Monitoring

A vial containing less than one milliliter of mustard agent is prepared to be delivered to the Chemical Assessment Laboratory. The agent samples are analyzed and characterized by site laboratory personnel.
