In the **1960s and before**, the United States developed chemical weapons in response to Germany's use of them against Allied soldiers during World War I. The military securely stores these weapons at U.S. military installations at home and abroad. Edgewood Arsenal, Maryland, produces mustard and phosgene, but the arsenal is not large enough to store the agent. New installations are constructed in Huntsville, Alabama; Denver, Colorado; Pine Bluff, Arkansas, Tooele, and Utah.

After World War II ends, the United States produces nerve agents GB (sarin) at Rocky Mountain Arsenal, Colorado, and VX in Newport, Indiana. During the 1960s, the U.S. Army destroys chemical weapons using sea disposal, open-pit burning and land burial. In 1969, the National Academy of Sciences recommends sea disposal of chemical weapons be avoided; in November, President Richard Nixon halts U.S. production of chemical weapons.

PMCD merges with the stockpile storage mission in the U.S. Army Soldier and Biological Chemical Command to form the U.S. Army Chemical Materials Agency (CMA) to store, assess and dispose of chemical materials. CMA is tasked to work with state and local emergency response agencies for emergency preparedness activities in communities near stockpile sites for CSEPP.

ANCDF begins disposing of chemical weapons stored at ANAD, representing 7% of the original U.S. chemical stockpile. ABCDF begins disposing of mustard agent stored in large steel bulk containers at APG, representing 5% of the original U.S. chemical stockpile. NSCMP deploys Single CAIS Access and Neutralization System (SCANS) for the first time to treat CAIS item at Fort McClellan, Alabama. NSCMP completes RRS operations at Fort Richardson, Alaska, treating seven CAIS items and decontaminating 14 containers. NSCMP begins cleaning obsolete steel bulk containers at the Pine Bluff Ton Container Decontamination Facility (PBTCDF) at PBA.

World War I-era chemical munitions are recovered during the U.S. Army Corps of Engineers investigation and cleanup of the Spring Valley neighborhood in Washington, D.C. United States meets the CWC treaty milestone to destroy 80% of its former chemical weapons production facilities as NSCMP continues destruction mission.

TOCDF reaches a significant milestone, 11,111,111 consecutive man hours without a lost workday injury, on January 11, 2011 – 1/11/11. The milestone marked more than five years without a lost workday due to an injury on the job. ANCDF is inducted into the State of Alabama Engineering Hall of Fame. CAMDS operators perform its final Demilitarization Protective Ensemble entry. CMA commemorates the end of operations at PBCDF with a ceremony. CMA achieves destruction of 85% of the U.S. chemical agent stockpile since entry into force of the CWC. DCD completes the last of more than 20,000 safe container deliveries to TOCDF, and the facility destroys the last of 6,399 mustard agent-filled bulk ton containers. Disposal operations for the 108 bulk containers filled with mustard agent conclude at ANCDF. Pine Bluff Ton Container Decontamination Facility (PBTCDF) completion of 4,307-ton containers results in 6.5 million pounds of steel being recycled rather than landfilled as hazardous waste. National Safety Council awards TOCDF the 2011 Industry Leader Award, recognizing outstanding safety performance. ANCDF completes disposal of the chemical weapons stockpile at ANAD, destruction of 7% of the original U.S. chemical stockpile. UMCD completes disposal of the chemical weapons stockpile at UMCD, destruction of 12% of the original U.S. chemical stockpile. NSCMP conducts EDS operations at APG. (Photo - Ton containers (TC) await decontamination at PBTCDF at Pine Bluff Arsenal, Arkansas. Operators used magnetic induction heating to decontaminate 4,307 TCs, making them suitable for recycling.)

NSCMP deploys EDS to destroy three mustard-filled projectiles at Dover Air Force Base, Delaware. TOCDF completes disposal of the chemical weapons stockpile at DCD, destruction of 44% of the original U.S. chemical stockpile. CMA completes its Chemical Stockpile Elimination mission, destroying 89.75% (27,000 U.S. tons) of the nation's chemical weapons stockpile stored at seven sites. CMA continues its storage mission at BGCA and PCD. U.S. Army Chemical Materials Agency reorganizes to become the U.S. Army Chemical Materials Activity, retaining the designation of CMA. NSCMP reorganized as the Recovered Chemical Materiel Directorate (RCMD) under CMA. (Photo - Dover Air Force Base)

RCMD deploys EDS to destroy 10 recovered munitions at Schofield Barracks, Hawaii. Pueblo Chemical Agent-Destruction Pilot Plant Explosive Destruction System (PCAPP EDS) starts operations at Pueblo Chemical Depot, Colorado. Three recovered munitions are transported to APG from Dover Air Force Base, Delaware, for assessment as part of a treatability study.

OPCW inspectors conduct routine stockpile verification at Blue Grass Chemical Activity, accounting for every chemical weapon in storage to verify U.S. compliance with the CWC. PCAPP EDS completes its second campaign Dec. 5, eliminating 391 problematic 105mm and 155mm projectiles, 4.2-inch mortars and M70 bombs. RCMD returns to Pine Bluff Arsenal, Arkansas, for a second mission at the Pine Bluff Explosive Destruction System (PBEDS) to destroy RCWM.

Blue Grass Chemical Activity (BGCA) delivers the final GB-filled 8-inch projectiles to the Blue Grass Chemical Agent-Destruction Pilot Plant (BGCAPP), the last 8-inch munitions in the chemical weapons stockpile. BGCAPP completed destruction of the GB 8-inch projectiles May 11, marking destruction of an entire type of chemical weapon.

(Photo -BGCA toxic materials handlers guide GB 8-inch projectiles into an enhanced on-site container for delivery to the Blue Grass Agent-Destruction Pilot Plant for destruction.)
